

Appn. No. 10/617,961 (Lyon) Art Unit 2856 Examiner A. Jackson Amendment A

15. A receptacle having a main compartment provided with an open top approximately as great in area as the maximum cross sectional area of said compartment and having

- 5 (a) graduations representing macro measurement amounts of a predetermined capacity on the side wall of said main compartment and having
- (b) means to measure micro amounts of a predetermined capacity which involves the bottom wall of said main compartment.

16. The receptacle of claim 15 where said means to measure micro amounts of a predetermined capacity includes a supplemental measurement depression formed in at least the said bottom wall of said main compartment.

10

17. The receptacle of claim 16 where said supplemental measurement depression includes at least one measurement graduation.

18. The receptacle of claim 16 where there is a plurality of said supplemental measurement depressions.

15 19. The receptacle of claim 18 where said supplemental measurement depressions communicate with one another.

20. The receptacle of claim 15 where said means to measure micro amounts of a predetermined capacity involves reorientation of said receptacle such that both the said bottom wall and said side wall act as a said supplemental measurement depression.

20 21. The receptacle of claim 20 where means for aiding in the proper orientation of said receptacle are provided.

22. The receptacle of claim 20 where said supplemental measurement depression includes at least one micro measurement graduation means.
